RFP Proposal: `Retrieval Metainfo System with Incentive Mechanism`

Name of Project: Retrieval Metainfo System with Incentive Mechanism

Link to RFP: https://github.com/filecoin-project/devgrants/pull/217/commits/8744ccde9d460d0e3d41e296e297ea1c29bd1f08

RFP Category: `app-dev`

Proposer: @askender

Do you agree to open source all work you do on behalf of this RFP and dual-license under MIT and APACHE2 licenses?: Yes

Project Description

An amazing Retrieval Metainfo System with Incentive Mechanism that brings profit to data providers and makes data exchange easily.

Deliverables

- An open-sourced, dual-licensed (under MIT and APACHE2) service that allows:
  - Storage clients to submit meta information to the system.
  - Users to query the meta information of dataset and get instruction about downloading.
- A web application that displays the meta infomation and allows users to interect with their searched information.
- Tutorial workflow with demo usage.
- Well-documented, human-readable codebase.
- Multi-incentive mechanism for meta information providers.

Development Roadmap

MileStone 1: Finalize scope, workflow design, and architectural design

- Documents about the finalized scope of problem we will solve, workflow design and architecture design
- Technical selection, a Prototype and a Minimum Viable Product
- We will complete the above materials in 10 days
- 2 people will be working on this. A designer and A programmer.
- The amount of funding required: 20 FIL

MileStone 2: Service implementation

- a full implementation of the Service: insert/query/comment the meta information, and the incentive APIs
- Details: there will be user-friendly public APIs, and we will also create a substrate chain.
- we will complete them in 30 days
- 2 people will be working on this. 2 programmers.
- The amount of funding required: 100 FIL

MileStone 3: the web application

- a web application which implementation of all the functions
- Details: a web app based on React framework, allows for interections with chrome-extention wallet, on which users can send Filecoin/Likecoin/etc. as gifts to the metainfo providers. We will have some clients and users to test the app and put some metainfo of on-chain-data on the app.
- we will complete it in 20 days
- 2 people will be working on this. 2 programmers.
- The amount of funding required: 100 FIL

MileStone 4: All project deliverables (website, documentation, codebase)

- Tweak for better user experience. Write documents. Make introductive videos.
- We will complete them in 10 days
- 2 people will be working on this. 2 programmers.
- The amount of funding required: 20 FIL

Total Budget Requested

240 FIL

Maintenance and Upgrade Plans

Our team will maintain the webapp service consistently and upgrade it over time to make it a really cool product.

Team Members

- Team Member 1: askender
- Team Member 2: Qing

Team Member LinkedIn Profiles

- Team Member 1 LinkedIn profile: https://www.linkedin.com/in/askender-li-27059265/
- Team Member 2 LinkedIn profile: none

Team Website

https://anwen.cc/

Relevant Experience

- experience in NLP and machine learning, familar with all kinds of public datasets.
- experience in blockchain, substrate framework and Dissociative Identity Disorder (DID)
- experience in content platform with incentive mechanism. Member of Liker-DAO in Likecoin ecosystem.
- experience of python/javascript/golang/rust

Team code repositories

https://github.com/anwen

Additional Information

- I’m a participant in Likecoin Ecosystem which aims for decentralized rewards to good content.
- The retrieval system of Filecoin is very important for web3 and we’d very much love to contribute.
