Open Grant Proposal: `Phu Quoc Dog`

Name of Project: Phu Quoc Dog

Proposal Category: `app-dev`

Proposer: `phuquocdog`

Do you agree to open source all work you do on behalf of this RFP and dual-license under MIT and APACHE2 licenses?: Yes

Project Description

Decentralized dogs social network, it is the best social network for pets, where you can share photos and videos of your pet's life, rescue puppies, adopt a pet, find pet friendly places and take advantage of our useful pet services. Join the moon mission

SHIBA, DOGE just meme token. Phu Quoc Dog is a real coin for real services such as buy food and running a campaign on our platform so you can get more money!!

Phu Quoc Dog is a Substrate-based. Phu Quoc Dog is committed to providing easy-to-use blockchain infrastructure and creating a one-stop comprehensive infrastructure platform, which aims to reduce the threshold and cost for developers, while bringing them great returns.

Value

Phu Quoc Dog use Filecoin for raw images and blob storage, introducing structured meta-data marketplace protocols to the total number of general users. And use Storage for NFTs

What are the benefits to getting this right?

The storage space of smart contracts is limited and costly. As the gas limit per block is limited, so is the execution of a transaction, and FileCoin is a decentralized storage network that is frequently cheaper, faster, and more secure than centralized cloud data storage peers such as Amazon AWS, Microsoft Azure, and Google Cloud.

What are the risks if you don't get it right?

User may transfer the NFT with the encryption key to other user, which becomes a risk of abusing the system. Also we do not know when a user upload many file to own system have effect to Filecoin yet.

What are the risks that will make executing on this project difficult?

FileCoin has no standard library like aws s3, so it hard to implement and It is difficult to provide highly reliable benchmarks for Filecoin network performance today.

Deliverables

1. v1 Phu Quoc Dog Blockchain
2. v2 Phu Quoc Dog API
3. v3 Phu Quoc Dog Mobile app

Development Roadmap

Architecture

Substrate and Filecoin/S3 are the only required parts of the Phu Quoc Dog protocol.

Architecture-PhuQuocDoge

Milestone 1: Implement Filecoin API to own blockchain

- **Estimated duration:** 2 month
- **FTE:** 2
- **Costs:** 6,000 DAI

Number	Deliverable	Specification
1	Research	Enable IPFS publishing/linking of additional media types (image, video, & audio) to the galler
2	Enable governance	Through the modified BaseCallFilterlogic, the required governance functions can be enabled, including:
3	Unit Tests	We will add unit tests to cover mint, burn, transfer, getBalance, getTotalBalance for the basic token.
4	Testnet	Running the testnet

Milestone 2: Implement API and Blockchain Operating System

- **Estimated duration:** 2 month
- **FTE:** 3
- **Costs:** 6000 DAI

Number	Deliverable	Specification
1	Build API app	Back-end developed in PHP, running on MySQL, Elastic and using Web3js
2	Web3.storage	Storage protocol layer supports distributed storage of dApp data.
3	Build API Blockchain	Integration api app with Filecoin store and blochain network

Milestone 3: Implement Mobile app

- **Estimated duration:** 4 month
- **FTE:** 3
- **Costs:** 8,000 DAI

Number	Deliverable	Specification
1	Mobile app	UI and Mobile app developed in React.js and React native.
2	Wallets	Wallets supports blockchain Phu Quoc Dog and Filecoin. And swap FIlecoin with PQD

Total Budget Requested

- **Total Estimated Duration:** 8 months
- **Full-Time Equivalent (FTE):** 2
- **Total Costs:** $20k for initial grant

Maintenance and Upgrade Plans

Our first goal is still to develope a pet social network on a private blockchain platform. It will then integrate the NFT feature for each owner’s animal to be unique on the blockchain network.

And finally we will consider about integrating Defi arrays, integrating support for smart contracts from Ethereum’s ERC20 or Binace’s BEP20 platforms that can run on our blockchain.

We know it will take a long time to complete the above ideas, hope you and investors will join us on this path.

Team

Team members

- Thien Tran: CTO/Project Lead and Backend Developer

- Thanh Huynh: Full-stack Developer

Contact

- **Contact Name:** Thien Tran
- **Contact Email:** hello@phuquoc.dog
- **Website:** https://phuquoc.dog

Team Member LinkedIn Profiles

- https://www.linkedin.com/in/fcduythien

Team Website

- https://phuquoc.dog

Relevant Experience

Team members have development experience, including front-end development, back-end development, Devops, etc. We have participated in the Vietnam blockchain. The team has in-depth research and accumulation of blockchain technology.

Additional Information

Currently we have no funding for the Phu Quoc Dog system. We are excited to be part of the Filecoin community and we will continue to contribute as much as we can. Thank you for your time and thank you for considering us for the Filecoin.
