RFP Proposal: Filecoin <> Chainlink DeFi Data - Linkstorage

Name of Project: LinkStorage

Link to RFP: https://github.com/filecoin-project/devgrants/blob/master/rfps/chainlink-and-filecoin.md

RFP Category: app-dev

Proposer: 0xatm

Do you agree to open source all work you do on behalf of this RFP and dual-license under MIT and APACHE2 licenses?: Yes

Project Description

With the arrival of the era of multi-chain and the use of smart contracts growing in popularity, the current dApps architecture is obstructing the development of cross-chain dApps. As we all know, dApps in Ethereum can only query the corresponding data through event logs, but event logs have many restrictions: a maximum of 3 indexed parameters and the maximum number of parameters cannot exceed 17, etc. In addition, some other blockchains do not even have the function of event logs like Ethereum provides, so developers can only store some critical data by themselves, mostly in centralized servers through other alternatives.

That’s why we come in. The Linkstorage - a unified data storage protocol that provides the ability to enable web3 builders to sync data between blockchains and IPFS/Filecoin through Chainlink External Adapter. The web3 developers can use this protocol to save a massive amount of tamper-proof data onto Filecoin in a cost-effective approach, and the protocol will also provide a unified dashboard for the web3 builders to track and monitor their cross-chain dApps data all in one place in a manageable way.

Deliverables

1. Chainlink External Adapter to sync data into IPFS/Filecoin with demo
2. Unified dashboard to track and monitor data

Development Roadmap

Milestone 1 (Week 1 to 5):

- Build a Chainlink external adapter
- Integrate the external adapter with IPFS/Filecoin

Milestone 2 (Week 6 to 8):

- Setup a Chainlink node for testing purpose
- Demo app to show how to use that external adapter

Milestone 3 (Week 9 to 12):

- The external adapter enhancements
- Dashboard development
- Maintenance

Total Budget Requested

We’re a squad of 5 and the total budget for the roadmap is $72,450 for a period of 12 weeks.

- Milestone 1: $31,500
- Milestone 2: $15,750

- Milestone 3: $25,200

Maintenance and Upgrade Plans

We’re keen to keep maintaining the protocol and making it as a long-term business. Furthermore, we’d like to build a community and collect feedback and suggestions so as to continuing enhance the product.

Team

Team Members

- Victor Feng: requirements, documentation, core development, and support
- Harry Chu: community management, documentation, QA, and support
- Samdanae Imran: frontend developer
- Ling Fan: Nodejs developer
- Anthony Somervell: Smart Contract developer

Team Member LinkedIn Profiles

- Victor Feng
- Harry Chu

Relevant Experience

The team has many years of blockchain-related project management and has extensive experience in the dApps development built on top of Ethereum, IPFS and Filecoin. And familiar with how to use Chainlink Oracle in smart contracts.

Victor Feng: Certified blockchain solution architect and Ethereum developer. He has around 15 years of experience in the IT industry and has extensive hands-on experience in IPFS/Filecoin apps development. He Led several DeFi and NFT related projects in front-end and smart contract design and development for several companies and projects. Beyond those, he also participated in and led several large-scale distributed and decentralized systems design and development in the banking, blockchain, telecom, and media industries.

Website

https://linkstorage.io/

Team code repositories

All source code and docs of this product will be published on GitHub (https://github.com/linkstorage)

Additional Information

We thank you for your consideration. Please feel free to reach out to nftvictor@gmail.com if you have any questions or suggestions for our proposal.
