PRIMIS

- **Team Name:** Primis
- **Payment Address:** 0x0Ad212E301AD590f4E70dA0c0Aa2912273cB4098 (USDC)
- **Level**: 1

PROJECT OVERVIEW

OVERVIEW

Primis Desktop provides a one-stop Web3 integrated client for the Polkadot ecosystem.

PRIMIS WEB3 DESKTOP FOR POLKADOT

Primis Wallet

Primis Desktop Wallet is the best tool to manage multi-chain assets on the Polkadot ecosystem, such as Polkadot, Kusama, and other parachains. Asset management mainly includes digital/NFT assets checking, sending, receiving, and trading records on the Polkadot ecosystem.

P2P Chat

Primis Desktop provides encrypted chat groups for Polkadot ecosystem users to discuss decentralized Gov2 governance and Proposal freely. ZK-Proof technology will be combined into Primis chat groups to offer more privacy and decentralized DAO governance space.

Primis Desktop could automatically create encrypted chat groups for Polkadot ecosystem DApps, each DApp has its own independent chat group.

- Channels For Chat

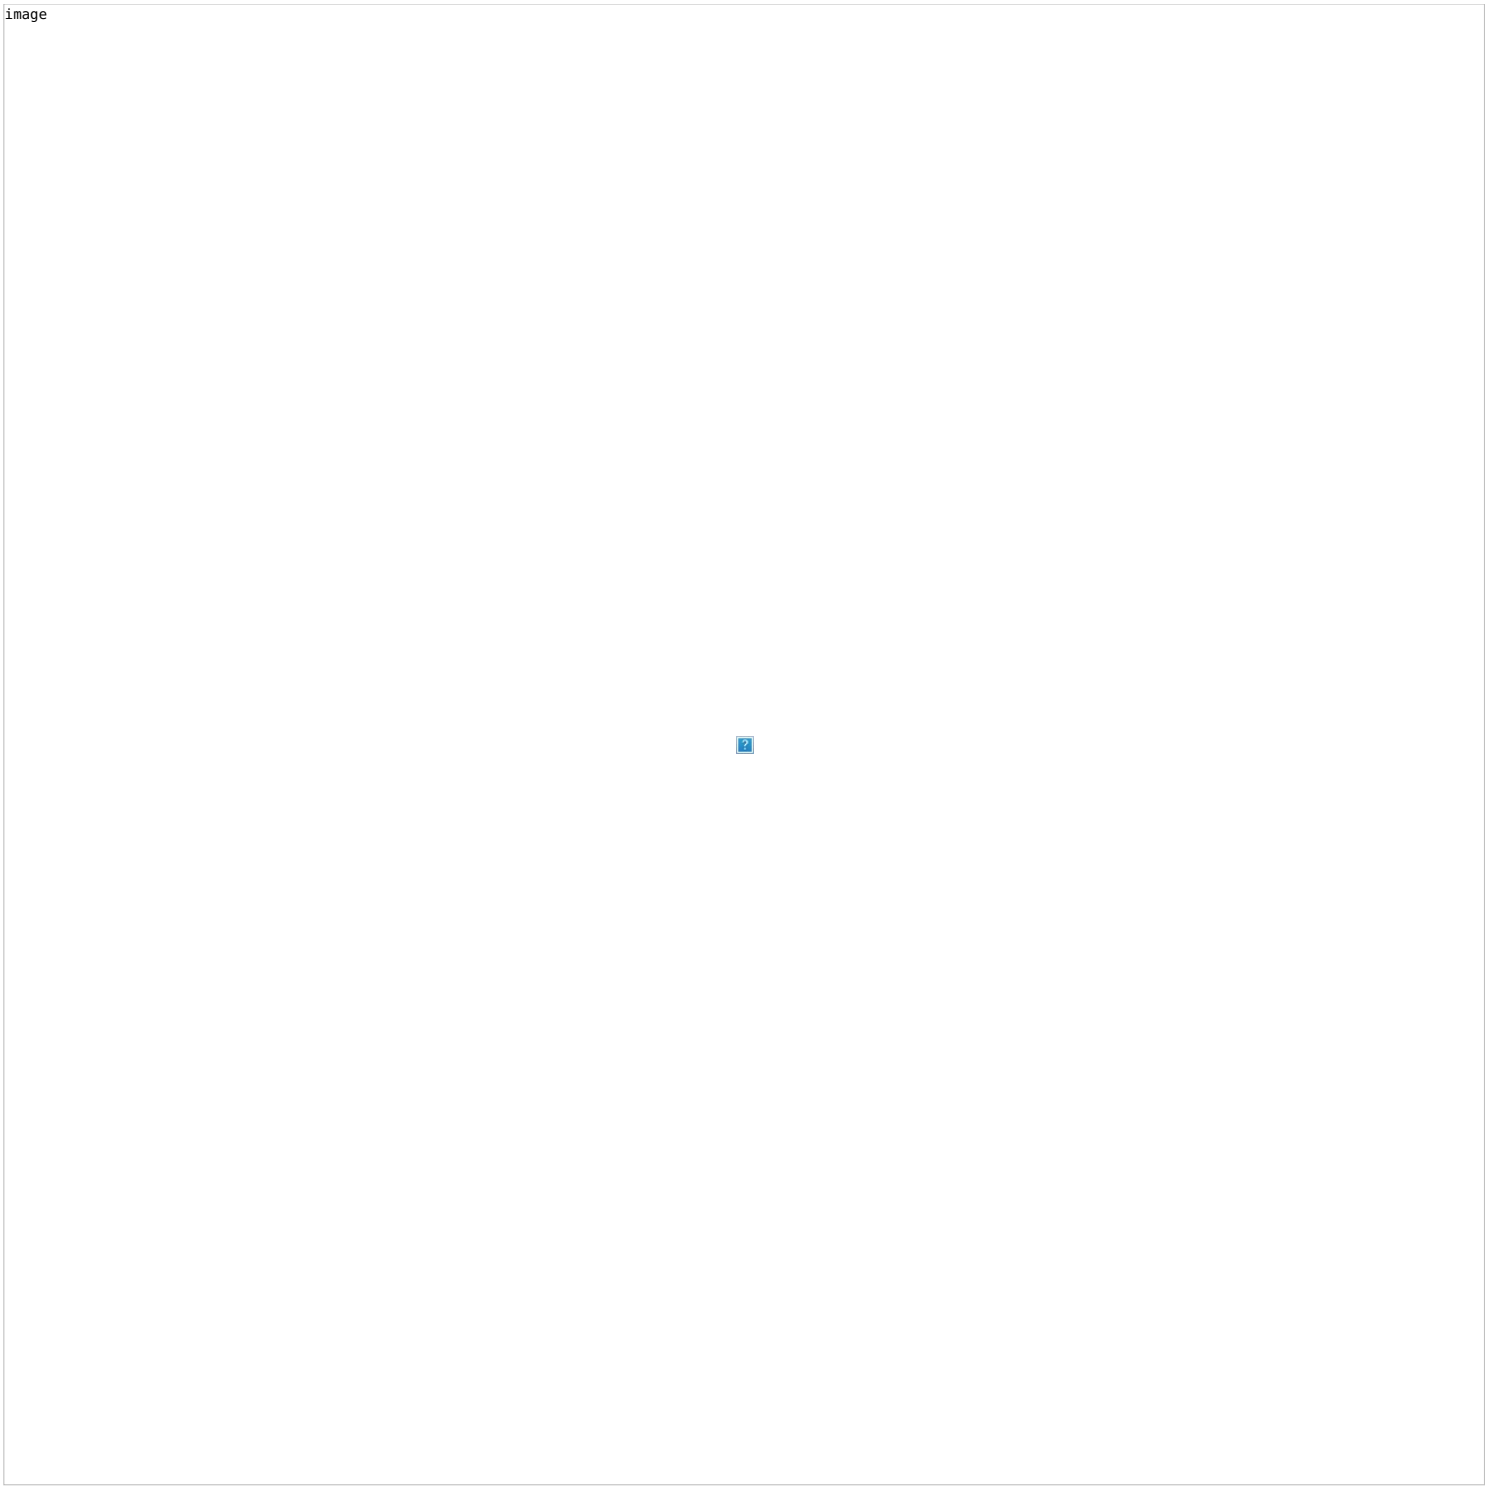
- P2P Chat

image



Subscribe

Primis Desktop also is a place for users to subscribe to Polkadot decentralized notifications like EPNS. Initially, Primis Desktop will provide asset change notifications for Polkadot, Kusama, and other parachains. More on-chain DApps notifications to exploit in the future.

Primis Web3 PNS Browser

Primis Desktop will gestate a Chrome-compatible PNS browser for the Polkadot ecosystem, allowing Polkadot ecosystem users to access Web2 pages and interact with Web3 DApps freely. Primis Web3 PNS Browser supports Polkadot ecosystem PNS domains' resolution and visit.

Unlike traditional browsers such as Chrome, Brave, and Web2 centralized Cloud Service, Primis Web3 PNS Browser is based on a data relay network, where access and application data are transmitted to clients or Primis terminals through a relay network of Primis nodes.

DApp Self-Hosting Platform

Primis Desktop provides the plug-in function. All DApps on the Polkadot ecosystem can integrate and deploy on the Primis relay node network and upgrade and confirm through the reliable connection contract in a smart contract to ensure applications' security.

Due to being the first Web3 desktop, Primis will interact with Polkadot's Web3 Ecosystem and bring the brand-new desktop concept to web3 users of Polkadot.

All of our teammates truly believed in the Web3 Revolution! That's why we want to boot this Web3 project.

TECH STACK

Supported Chains: Polkadot, Kusama, and other Parachains such as Acala, Astar, and Moonbeam.

Client language: Electron, React

Server language: Nodejs

P2P language: Golang

ECOSYSTEM FIT

Primis is the first blockchain project known as the web3 desktop. And we want to attract more other ecosystems' web3 users to Polkadot ECO. Since primis is based on the concept of Web3, it has strong relationships with the most famous web3 organization W3F, and must be born here.

TEAM

TEAM MEMBERS

Primis team has rich experience in the fields of the public chain, infrastructure, and defi. Team members' info will be released after reviewing.

CONTACT

- **Contact Name:** Andy
- **Contact Email:** Contact email (contact@primis.cc)
- **Website:** primis.cc

LEGAL STRUCTURE

- **Registered Address:** This info will be released after reviewing
- **Registered Legal Entity:** Also, this info will be released after reviewing.

TEAM'S EXPERIENCE

Primis team has developed some blockchain projects, like Metauce

TEAM CODE REPOS

Github

TEAM LINKEDIN PROFILES (IF AVAILABLE)

This info will be released after reviewing

DEVELOPMENT STATUS

Primis Team already completed the designing work of Primis Desktop and started working on Milestone 1 Tech Tasks.

DEVELOPMENT ROADMAP

OVERVIEW

- **Total Estimated Duration:** 6 weeks
- **Full-Time Equivalent (FTE):** 3 FTE
- **Total Costs:** 10,000 USD

MILESTONE 1 - POLKADOT ECO WALLET

- **Estimated duration:** 6 weeks
- **FTE:** 3
- **Costs:** 10 ,000 USD

Number	Deliverable	Specification
0a.	License	MIT
0b.	Documentation	We would provide an **inline document** of code and tutorial docs that explain how users can install it.
0c.	Testing Guide	Unit tests will cover all core functions to ensure functionality and viability. We will describe how to run the tests in the tutorial.
0d.	Docker	Wallet application does not require Docker, and we would provide a client for users to install under Windows/MacOS system.
1.	Build app structure	We will have the core structure of the application in place.
2.	Implement wallet view	Create, import, view, and transfer functions will be provided by the integrated Polkadot wallet.
3.	Build Polkadot ECO wallet	Checking, sending, receiveing assets of Kusama, Moonbeam, and Acala will be provided for Primis users.
4.	NFT assets management	NFT assets can be viewed, sent, and received under Primis.
5.	Setup Primis NFT avatar	Users can set NFTs as their wallet avatars.

FUTURE PLANS

Short-term: After finishing all milestones, the users' amount of Primis web3 desktop will be over 50K.

Long-term: The most influenced Web3 desktop
