BD Wallet

- **Payment Address:** 3FfrG9FrZXmPikEYJ9FdHPoRZ2nPjMY45W
- **Status:** Terminated

Project Overview :page_facing_up:

The full name of BD Wallet is `Black Diamond Wallet`, It is a multi coin crypto wallet enables blockchain developers to build their DApps and wallets natively without having to worry about the low-level implementation details.

Unlike other wallets, we also support centralized wallets which we call `cloud wallets`. Through the cloud wallet, we provide users with functions such as project rating, easy-to-operate staking, and DeFI vaults. Currently, the cloud wallets has served over 70,000 blockchain industry users.

Cloud wallets can be considered as wallet implementations with partial centralization features, keeping their cryptocurrency for users, similar to “PayPal”. Cloud wallets exist to reduce users who have no experience in using cryptocurrency wallets. They don’t need to know any implementation details about the wallet, such as mnemonic words, secret keys, etc., users can directly transfer and receive encrypted currency through the account registered in our cloud wallet (the account may be a mobile phone number or email) And use other services, it is more friendly to novice users. According to our research, many users in China have this requirement. They need a simple and easy-to-use wallet and don’t need to record mnemonics and secret keys by themselves.

And we also have HD wallet to choose from to meet the needs of high-end users.

Now, we intend to fully support the Polkadot ecosystem and contribute to the prosperity of the Polkadot ecosystem

Overview

BD Wallet which formerly known as Black Diamond Ratings, was created in January 2018, it is the first jury-type blockchain project rating in the world, with more than 500 professional reviewers, all of whom are senior practitioners in the blockchain industry. The rating range includes exchange ratings, cryptocurrency ratings. Currently, it has accumulated 17,000+ ratings, it is the largest cryptocurrency rating agency in China.

On August 15, 2020, the company strategically merged with Bi Da Wallet and officially changed its name to Black Diamond Wallet. Black Diamond Wallet has now developed into a digital open financial one-stop solution platform integrating cryptocurrency storage, financial service, project rating and industry social contact.

We have a professional review team to look for high-quality projects on the market and put them on the rating database. Users or project issuers can also submit project information to us, which can be included in the project database after passing the review.

At the same time, we have a team of professional reviewers to score and rate the items in the rating library, as well as to post comments. The reviewer is a professional blockchain practitioner or cryptocurrency investor. It takes 3 years of industry experience and more than 500,000 encrypted assets to be eligible to serve as a reviewer, and provide relevant certificates to the BD team for review. Provide this rigorous screening mechanism to ensure that each reviewer is professional and to ensure fair and impartial scoring and rating of projects. Of course, the reason why reviewers will actively participate in our project review is because we will give a certain amount of HZT token rewards for high-quality reviews.

Combining ratings and wallets is where our BDWallet is innovative. We provide users with professional project ratings. Users can view the project profile, reviewer evaluations, and reviewer ratings of related currencies through our rating library, so as to deepen users’ understanding of the project and avoid users not knowing the project. The situation makes blind investment decisions.

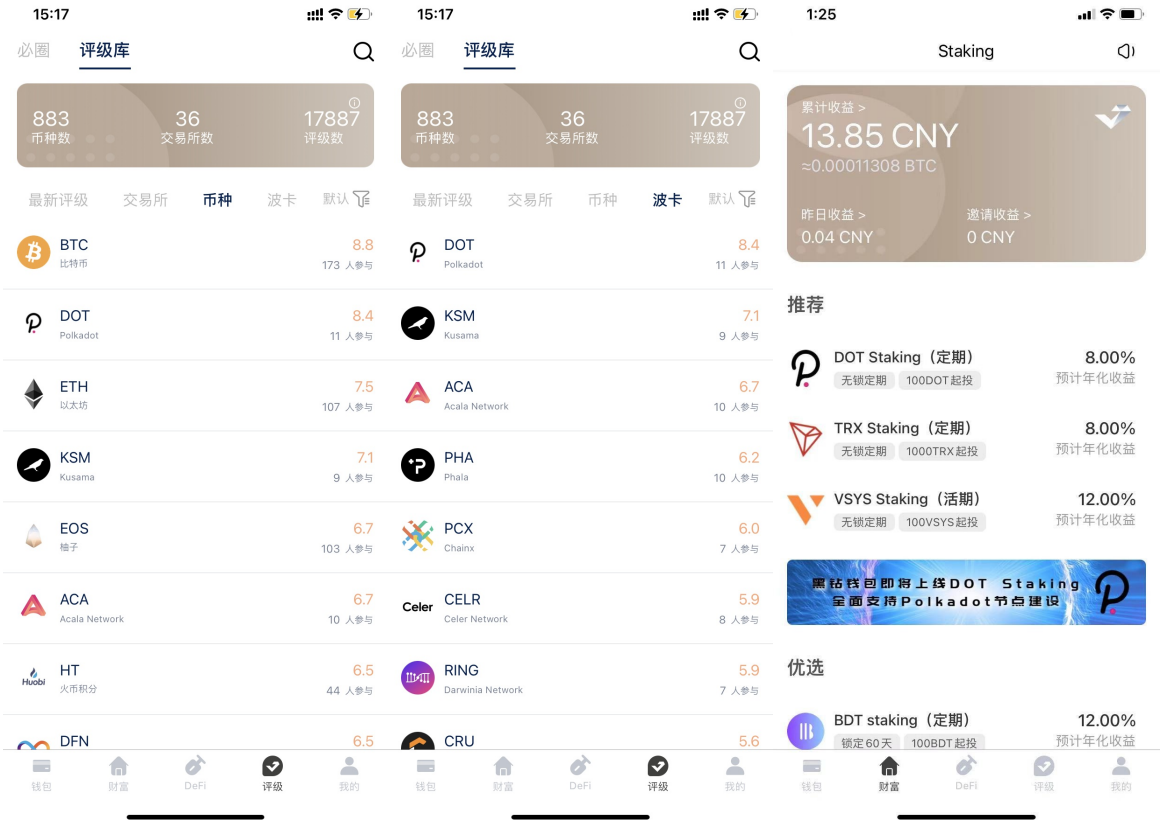

And users can leave a comment under each rating, and other users can also see the message, so that users can increase their stickiness and frequency of use of the wallet. Users not only use the wallet as a tool, but also a channel for obtaining and understanding project information.

BD Wallet will fully support the construction and development of the Polkadot ecosystem:

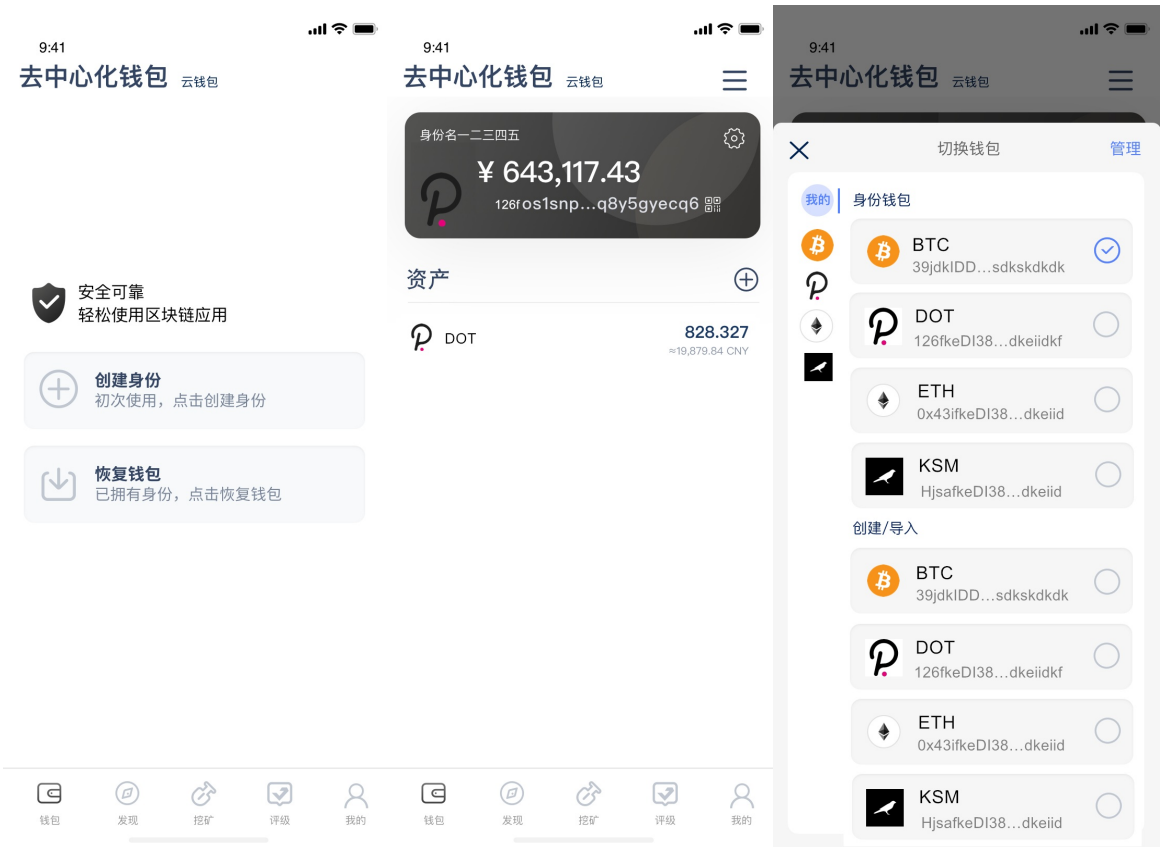

1. Launch a special version of Polkadot ecosystem project Rating, in order to let more users know about Polkadot and other Polkadot related projects.
2. Put the service of DOT Staking online to help the construction of Polkadot Node.
3. Support DOT, KSM and other polkadot ecosystem hot projects token recharge and withdrawal.
4. Support Polkadot ecosystem DAPP access in the future, making more users to use Polkadot Eco's DAPP easily.

Project Details

- cloud wallet

- hierarchical deterministic wallet

Ecosystem Fit

In the current market, there are products in the same type of BD Wallet, such as imtoken, cobo wallet, math wallet.

BD Wallet has its own unique characteristics.BD Wallet Provides the world’s first jury-style rating service. It is the country’s largest rating agency and has the country’s largest rating data. BD Wallet also has a social function, which facilitates information sharing and exchange between users.

Most of the cryptocurrency users in China do not have basic blockchain knowledge, and do not know how to participate in node construction, mortgage, voting, and nomination operations. BDWallet provides lower operating thresholds for users, compared to other Polkadot Wallet, users only need to care about the interest rate that can be obtained when participating in staking in BDWallet. We help users implement investment details.

And BDWallet pioneered the shared staking model. When user A invites user B to participate in DOT staking, user A can obtain corresponding HZT token rewards. HZT token is the governance currency issued by our wallet. Through this incentive model, more users will spontaneously invite DOT holders to participate in DOT Staking, so that more people will participate in the ecological construction of the DOT community.

Team :busts_in_silhouette:

Team members

- Iori Zuo: Lead the team, responsible for project coordination and strategic planning.
- Steve Li: ui designer.
- Jie Li: Senior Software Engineer.
- Robert Li: Senior Software Engineer.

Team Website

- https://www.heizuan.com/

Legal Structure

- Company name: Fuzhou Wakanda Information Technology Co., Ltd.
- Registered address: Room F-S309-05, 3rd Floor, Annex Building, F Zone, Fuzhou Software Park, No. 89 Software Avenue, Gulou District, Fuzhou City, Fujian Province, China

Team Code Repos

- BD wallet cloud version code base: https://github.com/bdwallet/wallet-app
- Bd-wallet-core code base: https://github.com/bdwallet/bd-wallet-core
- A redux framework for TypeScript: https://github.com/redux-model/redux-model

Team experience

- Our team members are all come from the Internet industry, and have worked for Baidu, Tencent, Bit Age and other first-tier Internet companies and first-tier digital currency exchanges, which have developed hellokimi blockchain game platform and linkbit token airdrop tool, and focused on technology research and development in the field of cryptocurrency wallets in 2018.

Development Roadmap :nut_and_bolt:

1. Cloud wallet fully supports the Polkadot ecosystem
    - Support deposit and withdrawal of DOT, KSM on `cloud wallets`
    - Support the Polkadot ecosystem projects rating
    - Support DOT Staking service to help users participate in Polkadot verification and nomination more easily
2. Complete the development of `bd-Wallet-core`.

    `bd-wallet-core` is open source library that implements low-level cryptographic wallet functionality for many blockchains. It will fully support the coins of the Polkadot ecosystem, so that to make it easier for developers to enter the Polkadot system.
3. Complete the development of `Hierarchical Deterministic Wallet`, including:
    - Deposit and withdrawal of Polkadot ecosystem coins (including at least DOT, KSM)

- Polkadot Dapp Browser

Overview

- **Total Estimated Duration:** 3 months
- **Full-time equivalent (FTE):** 3.5 FTE
- **Total Costs:** 1.35 BTC

Milestone 1 — Complete fully support of cloud wallet for Polkadot ecology

- **Estimated Duration:** 1 month
- **FTE:** 2
- **Costs:** 0.3 BTC

Number	Deliverable	Specification
0.	Support deposit and withdrawal of DOT and KSM on cloud wallet	We will build DOT and KSM nodes and interface with polkadot-js on the server side to support the deposit and withdrawal of DOT and KSM tokens. At the same time, we will also launch a corresponding deposit and withdrawal portal on the app side. Once users log in the app, they can launch corresponding operations, such as recharging dot and participating in Staking.
1.	Support Polkadot ecosystem project rating	We will launch the project rating of polkadot ecosystem on the app. After logging in to the app, users will be able to rate the projects which they are focusing on or knowing. After the rating is published, other
2.	Support dot staking	We will open the dot staking portal on the app side to help users participate in Polkadot verification and nomination, but do not have relevant experience. The staking page will demonstrate the corresponding annualized earnings.

Milestone 2 — Complete bd-wallet-core development

- **Estimated Duration:** 1 month
- **FTE:** 2
- **Costs:** 0.55 BTC

Number	Deliverable	Specification
0.	api design	Design the api that will be used by the decentralized wallet, including mnemonics, address generation, derivation, transaction signatures, etc.
1.	documentation	Instructions and examples for use.
2.	unit test	Write for each unit test.
3.	DOT, KSM and other coins support	Interface with mainstream coins that support the polkadot ecology, such as DOT and KSM.
4.	Publish to project library	Release our origin source library to the NPM central repository for developers to import and use

Milestone 3 — Complete bd-wallet development

- **Estimated Duration:** 1 month
- **FTE:** 2.5
- **Costs:** 0.5 BTC

Number	Deliverable	Specification
0.	UI design	The UI of the Hierarchical Deterministic Wallet is designed to provide good interaction experience for users
1.	Wallet constructure design	The constructure design of the wallet. The APP contains local storage strategy, broadcast node management, multi-coins management and other services. The server should provide API interface which supporting multiple chains and in charge of obtaining transaction

		records, transaction status and other information
2a.	Transaction function development	The core function of wallet is to develop the coin management and charging related functions of app
2b.	DApp browser development	The development of dapp browser based on polkadot Ecology will serve as the flow entrance of polkadot ecology DAPP
3.	share staking	To complete the development of shared staking, users can invite friends to participate in Polkadot staking through WeChat sharing, and get hzt rewards
4.	release	Project published available for download and use by users

Future Plans

1. In the upcoming wallet development program, we will develop the decentralized wallet, and also fully support for polkadot Ecology Dapp access.
2. We plan to establish polkadot (China) Technology Alliance in China to study and promote the technology and concept of polkadot and appeal more developers to join in the ecological development of polkadot and work together to achieve the vision of web 3.0 as soon as possible. At present, multiple exchanges and media companies such as AEX, BKEX, Safe Custody, and token damo have jointly initiated the establishment of Polkadot (China) Technology Alliance
3. We have focused on the study of the deployment of asset synthesis protocols on the Polkadot Network, in order to map real-world physical assets onto the blockchain, which we feel is a very large market, and we will invite more developers to participate in this study
4. In future plans, we consider voting on the chain to elect our reviewers. In this way, we believe that our rating mechanism will be more transparent and credible

Additional Information

So far, we have completed the development of Black Diamond Wallet cloud wallet, which can provide users with multiple services, such as staking, social networking, rating, defi mining and others. Currently, it has fully supported for polkadot, at the same time we have been preparing for the creation of the polkadot (China) Technology Alliance.
